-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 7-14, and 16-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Iwasa et al (US 5,565,117).

As to claim 1, 14, 16, and 17, Iwasa et al disclose a method of joining a pair of overlapping workpieces, comprising the steps of disposing a filler material at a gap between a pair of overlapping workpieces, applying pressure to the workpiece so that the filler material is crush, and joining the workpieces together (figures 2 and 3).

As to claim 2, wherein the filler material inherently has an initial density and the final density.

As to claim 7, the filler material is porous (figure 1).

As to claim 8, the filler material is fibrous-like.

As to claim 9, the material has been establish by the welding society.

As to claim 10, the material is compatible with the workpiece.

As to claim 11, the welding process is by arc welding.

As to claim 12, applying pressure includes clamping the pair of overlapping workpieces together (figure 2).

Art Unit: 1725

As to claim 13, placing a first and second workpieces on together (figures 2 and 3).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-6 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwasa et al.

Iwasa et al disclose the claimed invention, but silent on the initial and final density.

However, it would have been obvious to one of ordinary skill in the art to choose a material with an initial density and a final density of a hundred percent, since the entire filler would be compressed and allow fusion between both workpieces.
